### Considerations Criteria

**Efficiency** is coded “Yes” if the planning unit does not require bus service to the neighborhood school and “No” if the planning unit requires bus service to the neighborhood school.

**Proximity** is coded “Yes” if the planning unit is within the walk zone and “No” if the planning unit is outside the walk zone to the neighborhood school.

**Stability** for all planning units was coded “Yes” because none of the students who will be part of this boundary change have been impacted by another elementary boundary change in recent years.

**Alignment** shows the neighborhood middle school in 2019. Alignment will be reassessed after boundary proposals are created to determine if small groups are separated from their peers as they transition to middle school.

**Contiguity** is coded “Yes” if the planning unit is attached to other nearby planning units that form the attendance boundary, and “No” if the planning unit is detached from other planning units that form the attendance boundary.

**Demographics** shows the estimated number of students by planning unit that are economically disadvantaged.
