- Attachment A: Fall 2019 10-Year Enrollment Projections, 2020-21 through 2029-30
- Attachment B: Fall 2019 Housing Unit Forecast and Projected Student Yield
- Attachment C: Fall 2019 Student Generation Rates
- Attachment D: Background on Projections

Executive Summary

Every fall, APS publishes 10-year enrollment projections that are used for planning purposes.

- In the short term, the projections help inform needs such as budgeting and staffing for the next fiscal year.
- In the long term, the projections are used in planning processes such as the biennial Capital Improvement Plan (CIP).

The Fall 2019 10-year projections will be used for budgeting and staffing in Fiscal Year 2021, as well as for developing the FY 2021-30 CIP.

Preparing this Report

The “Fall 2019 10-year Projections for 2020-29” was produced by the Department of Planning and Evaluation, based on the following:

- Student enrollment on Sept. 30, 2019
- Methods validated by the 2015 Community Facilities Study and improved upon regularly in consultation with the external consulting firm of RLS Demographics
- Estimates for additional enrollment over the next decade are based on data from Arlington County Government that consider:
 - Approved and potential housing developments
 - Births and future Kindergarten students, which are based on population estimates and fertility rates

The County and APS collaborate closely in this effort. For background on how APS has worked with the County, the community, and consultants to evaluate County and APS methodologies and develop recommendations for the projections process, please see Attachment D of this report.

Key Findings

The new projections show that PreK-Grade 12 enrollment is expected to surpass 30,000 students by 2021-22, to peak in 2026-27 at about 31,000 students, and decline by about 200 students by 2029-30. When compared with enrollment on Sept. 30, 2019, the 2019 projections demonstrate the following at each school level:

- **High school** enrollment will increase by about 2,000 students, from 7,500 students in 2019-20 to about 9,600 by 2029-30.
- **Middle school** enrollment will increase by about 700 students from 6,119 in 2019-20 to about 6,800 students in 2029-30.
- **Elementary school** enrollment, including PreK, will increase by almost 1,000 students from 14,276 in 2019-20 to 15,200 in 2022-23, followed by a decline back to 14,400 students by 2029-30.

In developing the 2019 10-year projections, it was apparent that previous estimates in the 2018 10-year report were higher than the actual numbers due to [a change in the countywide forecasts of births and housing construction](#). At the elementary school level, this was specifically informed by the following:

- **This was the first year that APS could compare two years of actual and forecasted births.** 2019 marks the third year that the County has shared its forecast of births with APS and the first year when two years’ worth of actual and forecasted births can be compared, for 2017 and 2018.

- **Births were overestimated in 2017 and 2018.** The births forecast model resulted in overestimated births for 2017 and 2018, leading to higher enrollment forecasts for the entering Kindergarten classes in 2023-24 and 2024-25 than are now expected.
- **Assumptions about upcoming births in the next 10 years have changed.** The County’s forecast was recalibrated to incorporate a lower fertility rate and fewer births than had been previously forecast. (The update and recalibration to the model which forecasts births is covered in the methodology section of this report.)
- **This change means lower elementary school growth is now expected over 10 years than previously anticipated.** While elementary school enrollment growth remains constant until 2022, the recalibration of this model has led to a new birth forecast that is significantly lower than previously estimates for the 10-year period.

More information on this model and the birth forecast can be found in the “Assumptions and Methodology” section of this report.

Using the Projections

As APS continues to update the projections annually and the CIP every two years, this iterative approach to long-term planning allows us to use more current information. APS is closely monitoring the possible impact of the new Amazon headquarters in Arlington, and the impact on housing development. We will continue to monitor information by neighborhoods that could suggest changes to where families with students live, particularly as the number of high-rise apartment buildings increases along transit corridors.

In terms of the Elementary School Planning Process for 2021-22, these new projections:

- Do not affect Phase 1 of the Elementary School Planning initiative, which is focused on moving some elementary schools to maximize capacity and support current enrollment needs
- Will be used in Phases 2 and 3 of the Elementary School Planning process that will result in new boundaries taking effect in September 2021.
 - Planning Unit-level projections will be prepared for the Phase 2 data review (Spring 2020).
 - In Phase 3 (Fall 2020), APS will propose boundary adjustments using data refined in Phase 2.

Next Steps

In February 2020, the School Board will hold a Work Session on the CIP. The session will cover updated information comparing the new projections with planned seats based on updated projections, and priorities for the FY 2021-30 Capital Improvement Plan. Supporting information will be published on the CIP webpage, available at <https://www.apsva.us/engage/preparing-for-the-2021-30-capital-improvement-plan-cip/>.

Glossary

Birth to Kindergarten Ratio (Capture Rate)

This rate reflects the historical percentage of children entering kindergarten in a particular year as compared to the total number of children born five years earlier to Arlington residents. The historical three-year birth to kindergarten rate is applied to assumed future births to estimate the number of entering kindergarten students five years later.

Cohort

A group of students having a statistical factor (such as the same grade or school level) in common.

Cohort Transition Rate (CTR)

This ratio uses historic enrollment data to identify trends (of growth or loss) over time. A CTR is calculated by dividing the number of students in a cohort (i.e., grade) by the number of students from the previous cohort in the previous school year. A cohort transition rate greater than one means there are more students entering school that year than there are enrolled in the previous grade. A cohort transition rate that is less than one means there are fewer students entering school than in the previous grade. The cohort transition rate is impacted by such factors as students moving in or out of a neighborhood or the County, APS student transfers, and other external forces affecting migration.

Because grade-specific CTRs may vary considerably from one year to the next, APS uses an average to estimate future school enrollment and produce the ten-year projections by grade for each school. The cohort transition statistic is a linear calculation. As such, sporadic fluctuations of historical enrollment data from year to year could affect the estimated projections of future enrollments.

Please note that school boundary adjustments or changes in the options and transfers policy will change historical enrollment trends at the school level and compel APS planning staff to make methodological changes to reflect the new boundaries or enrollment policy update.

Estimate

Calculations of past or present conditions, utilizing counts and known statistics

Projection

Measures future growth by extrapolating current trends and making assumptions regarding growth. The APS enrollment projections methodology uses assumptions regarding future births and future housing. Enrollment projections are only done for Grades K to 12.

Resident Live Births

Live births to mothers that reside in Arlington.

Student Generation Rate

The Student Generation Rate is used to estimate the student yield from new or “future” housing. This rate is the mathematical representation of the relationship between the number of existing housing units in Arlington County and the number of students—by housing unit type and affordability designation—enrolled at APS on September 30 for a given year. The student generation rate can be calculated each year because of the information sharing between APS (student data by address) and ACG (housing data by parcel).

Student Yield

The anticipated student yield from “future” housing units are included in the projections by the impacted neighborhood elementary, middle, and high schools. The projected student yield is calculated using the relevant student generation factor by the housing unit type (i.e., high-rise apartment, garden apartment, town house, etc.) and school attendance zone. The elementary school and middle school student generation rates by school attendance zones reflect the 2019-20 boundary updates.

In incorporating the student yield from new development, it is assumed that the yield from newly developed housing units will produce the same number of students every year once the development is constructed. This new approach has a cumulative effect that increases projected student enrollment at schools that have future housing developments within their neighborhood school attendance zones. This approach to student yields is applied to incoming cohorts in Kindergarten, Grade 6 and Grade 9. Prior to the Fall 2018 10-year projections, a new residential unit’s student yield impact was only factored in the year of construction, but not in subsequent years; the previous method did not account for the impact of the student yield beginning the first year after the future housing development was slated for completion.

Phasing of Student Yield

Student yields from [Committed Affordable Units \(CAFs\)](#) and single family detached homes are incorporated into the enrollment projections in the year that these units are assumed to be built. Meanwhile, the student yield from market rate residential developments were phased into the enrollment projections over a two-year period from the date that a residential development is forecast to be completed.

Data Sources

Annual Housing Unit Forecast

Starting in Fall 2017, the Arlington County Government (ACG) Department of [Community Planning, Housing and Development \(CPHD\)](#) began providing APS with a forecast of housing units for the County. This housing unit forecast is informed by the land use policy guidance of Arlington's [General Land Use Plan \(GLUP\)](#). The forecast uses two primary sources of development information which include the county-wide development pipeline data on recently completed projects, projects under construction, and approved projects and housing development assumptions derived from parcels with anticipated growth from approved sector plans and small area plans. Most importantly, the timeline of residential construction projects are identified by year, residential type, number of net new units, and affordability levels. This information helps APS estimate the number of new students and the year that a given housing development will add more students to neighborhood schools.

Births

Actual Resident Live Births

The Virginia Department of Health provided ACG with historical figures on live births to mothers that reside in Arlington through calendar year 2018.

Forecast of Births by Year

As recommended in the Arlington [Community Facilities Study \("CFS"\)](#) completed by Statistical Forecasting and RLS Demographics in October 2016, ACG uses the Cohort Component Model to project births in the long term for APS. In this method, the number of women of childbearing age (15-49) are projected and then multiplied by the corresponding age-specific fertility rate. Age-specific fertility rates are computed by averaging the actual number of births by each age cohort over a specified number of years and dividing by the age-specific populations. The Cohort Component Model was produced by RLS Demographics in 2016 and last updated in October 2019. With the latest update, the Cohort Component Model now estimates births for 2019 through 2024. This information helps APS to estimate future incoming Kindergarten cohorts, five-years after the forecasted births.

Master Housing Unit Database (MHUD)

The ACG Real Estate Assessment, A-Track, and Development Tracking were used to compile the MHUD database. The database provides an inventory of all housing in the County, including housing type, number of units, details on the number of CAF, and affordability classification for each complex (CAF only, Market Rate, or Mixed), and the presence of an approved Accessory Dwelling Unit (ADU) on a residential parcel. This information helps APS to develop student generation rates by housing unit type and school level. The Student Generation Rate is a mathematical representation of the relationship between housing units in Arlington County and the number of students enrolled in Arlington Public Schools on September 30 of each year. In other words, it is a factor applied to new housing to estimate the expected number of enrolled students from the new housing; this is specific to the building's location, housing type, and affordability characteristics.

September 30 Official Enrollment Count

Historical September 30 enrollment counts, by grade for each school, are used to develop the cohort progression ratios that estimate future enrollment. The data comes from the APS Monthly Membership Report for the month of September, which is prepared by the Information Services Department, see

<https://www.apsva.us/statistics/monthly-enrollment/>. This data is analyzed by school and by grade for purposes of developing historical enrollment trends.

In addition, APS staff has access to address level enrollment information from September 30. This information is relevant for assessing enrollment trends when boundary changes occur, see “Assumptions and Methodology” section.

Assumptions and Methodology

Actual Births

Since 2006, births have steadily grown by about 25% to 3,207 births in 2016. Since then, actual births have declined about 9% to 2,934 births in 2018¹.

According to the Virginia Department of Health, Division of Health Statistics data for live births by place of residence, this decline in births between 2016 and 2018 is not unique to Arlington County. In this same period, live births by place of residence declined by 12%, 6%, 2% and 2% in the City of Alexandria, Fairfax County, Prince William County, and Loudon County respectively. Similarly, a comparison of US Census Bureau, Population Estimate Program figures of births show a decline of 2% in national and Virginia births in the 2016-2017 to 2017-2018 period.

In the Fall 2019 10-year projections, actual births from 2015 to 2018 are used to project the incoming Kindergarten cohorts for 2020 through 2023.

Chart 1. Actual Birth to Arlington County Parents (2000 to 2018)

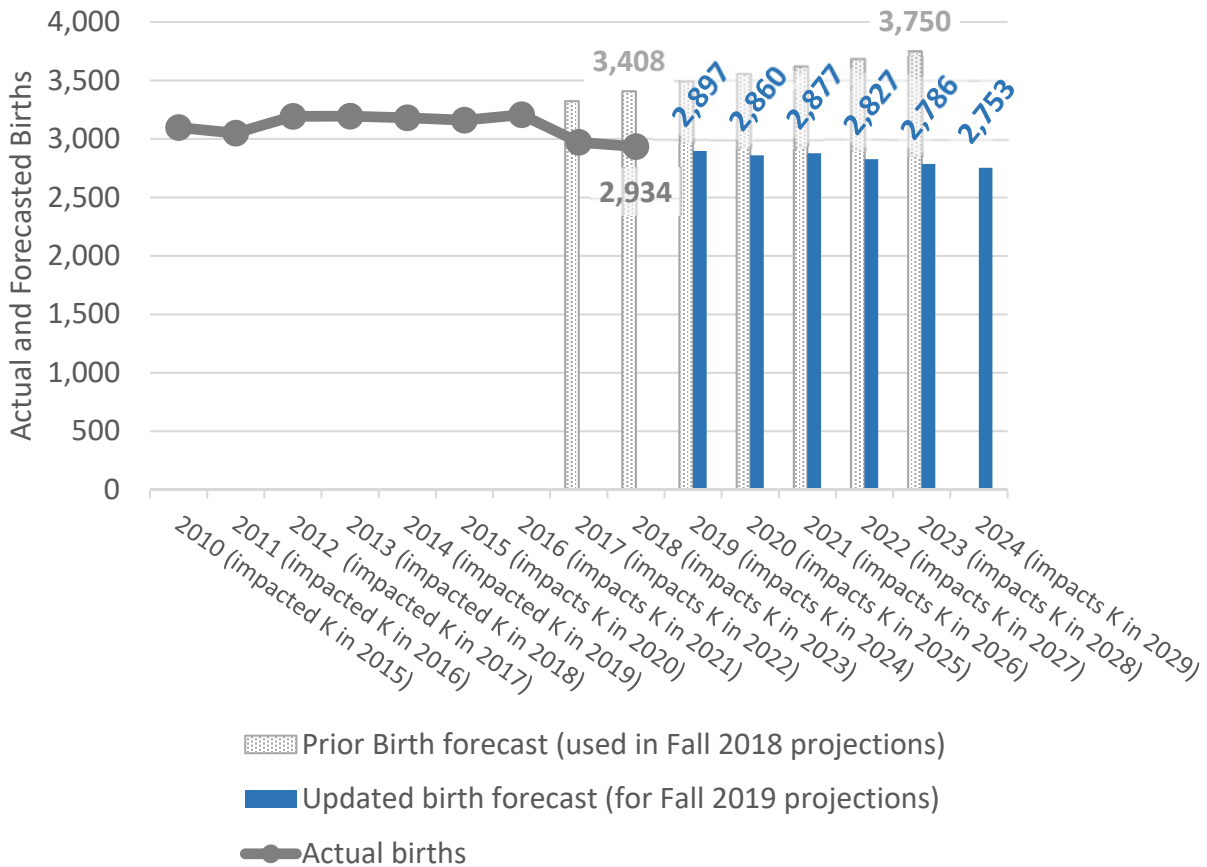

Source: Arlington County Government, Department of Community Planning, Housing and Development and the Virginia Department of Health, Division of Health Statistics.

¹ Note that the 2018 birth figure of 2,934 has since been revised down by 5 births to 2,929 births by the Virginia Department of Health, Division of Health Statistics. Because of timing, the revised figure was not incorporated into the projections modeling.

Forecast of Births

In Sept. 2018, ACG provided APS with the number of actual births to Arlington County parents for 2017 and 2018². This data provided an opportunity to compare actual births counts to forecasted births estimates from ACG for 2017 and 2018. On comparing these data, it was noted that the difference between actual and forecasted births was diverging and this divergence was widening: When comparing 2017 actual and forecasted births, the forecast over-estimated births by about 350 births; the 2018 comparison found that the forecast over-estimated births by about 470 births, see Chart 2.

Chart 2. Comparison of actual births and births used in the Fall 2018 and Fall 2019 10-Year Enrollment Projections

Source: Arlington County Government, Department of Community Planning, Housing Development; Virginia Department of Health, Division of Health Statistics; and RLS Demographics.

Because of the widening difference between actual and forecasted births, it was decided that ACG’s cohort component model, known as the *Cohort Projection System*, needed to be recalibrated since some of its assumptions were last updated in 2016. RLS Demographics undertook the work recalibrating the *Cohort Projection System* by incorporating (a) the ACG’s latest Arlington County [Cooperative Forecast, known as Round 9.1](#), for population; (b) an updated analysis of age-specific fertility rates using 2010 to 2018 historical birth data and US Census bureau estimates of the distribution of the female population

² Note that the 2018 birth figure of 2,934 has since been revised down by 5 births to 2,929 births by the Virginia Department of Health, Division of Health Statistics. Because of timing, the revised figure was not incorporated into the projections modeling.

by age; and (c) an updated analysis of age-specific migration using US Census Bureau estimates up to July 1, 2018. With the recent recalibration to the *Cohort Component System*, the births forecasts have been revised to be net positive, as previously calculated, but the year-to-year growth from 2019 to 2024 is forecast to moderate over time. By 2023, the new birth forecast is 964 births (or about 26%) lower than forecasted last year.

Birth to Kindergarten Ratio

The birth to kindergarten ratio is defined as the percentage of children entering kindergarten in a particular year as compared to the total number of children born five years earlier to Arlington County parents. Since 2000, this ratio has increased, which indicates that more resident families with children born in the county are staying in Arlington and/or more families with children born elsewhere are moving to Arlington County and enrolling their children in kindergarten at APS. For example, early in the decade the birth to kindergarten ratio was about 0.600, which indicates that about 60% of children born in the county enrolled as entering kindergarten students five-years later, see Chart 3. More recently this ratio has ticked up closer to 70%. For the past three school years, for example, the birth to kindergarten ratio averaged 0.708.

Table 2. Historical birth to kindergarten ratios

Birth Year	Resident Births	School Year Entering Grade K	Actual APS Grade K Enrollment	Birth to Kindergarten Ratio (Capture Rate)
2000	2,715	2005	1,501	0.553
2001	2,814	2006	1,627	0.578
2002	2,686	2007	1,610	0.599
2003	2,659	2008	1,697	0.638
2004	2,810	2009	1,924	0.685
2005	2,809	2010	2,003	0.713
2006	2,561	2011	1,968	0.768
2007	2,778	2012	2,179	0.784
2008	2,924	2013	2,139	0.732
2009	2,935	2014	2,196	0.748
2010	3,097	2015	2,152	0.695
2011	3,049	2016	2,127	0.698
2012	3,193	2017	2,253	0.706
2013	3,195	2018	2,293	0.718
2014	3,181	2019	2,231	0.701
Latest 3-Year Average, Birth to Kindergarten Ratio:				0.708

Source: APS, Department of Planning and Evaluation and Arlington County Government, Department of Community Planning, Housing Development.

In the Fall 2019 enrollment projections, the latest 3-year average birth to kindergarten ratio of 0.708 is applied to births that have occurred, or are expected to occur, between 2015 and 2024, to estimate the number of entering kindergarten students 5-years later.

New Residential Construction

ACG provided updated assumptions for the number, housing type, affordability levels, and location of new housing between the later-half of 2019 (Q3 and Q4) and 2029. This data is provided in a spatial format for use with [GIS software](#), so that the new housing assumptions may be matched to neighborhood school and planning unit boundaries. In this timeframe, ACG anticipates a total of about 15,700 net new units--above and beyond the existing housing stock--to be delivered in the county. Much of the new housing, with a 95% share, is expected to be multi-family highrise, followed by multi-family garden at 3%, townhouse at just over 1%, and single-family detached at just under 1%.

Table 3. Historical birth to kindergarten ratios

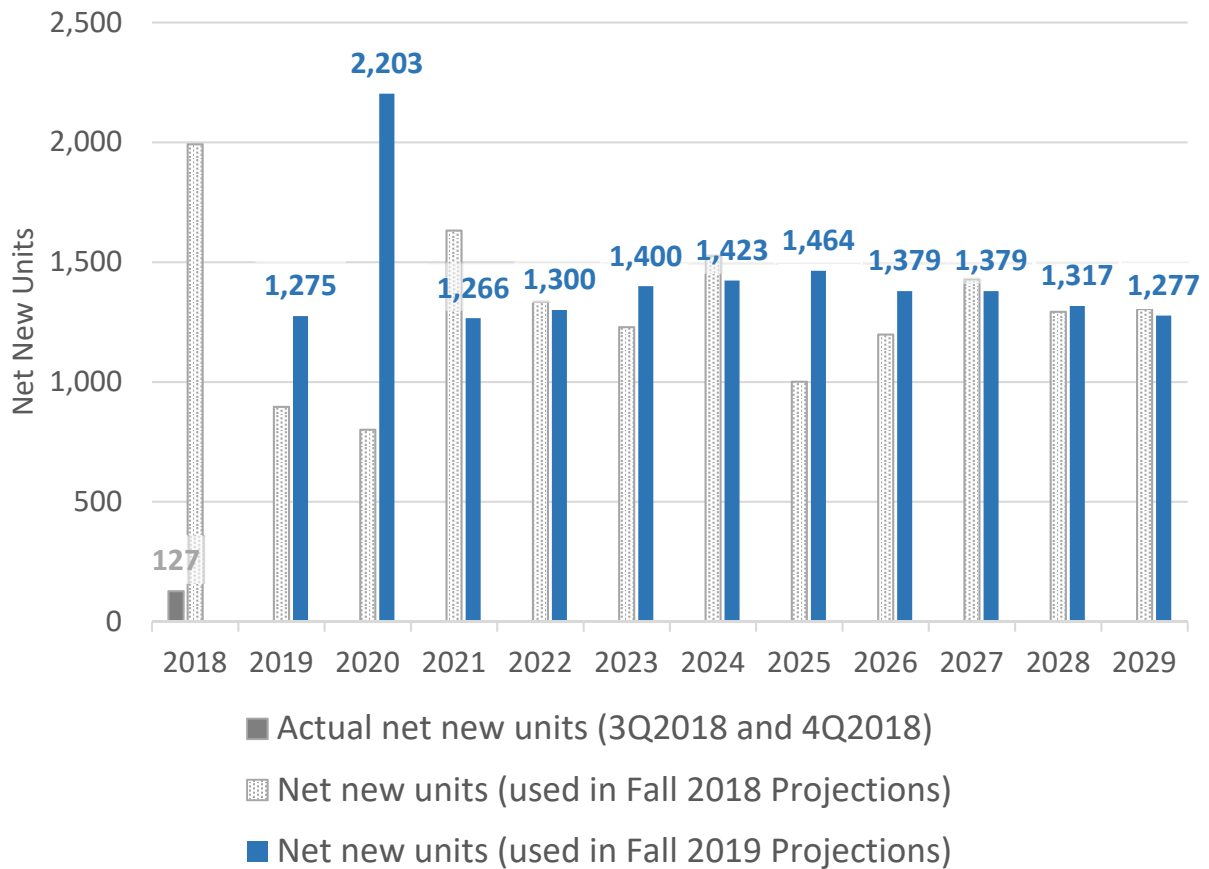

Projection Year	Multi-family Garden	Multi-family Highrise	Single-family Detached	Townhome	Total Net New Units
2019		1,275			1,275
2020	12	2,188		3	2,203
2021	36	1,230			1,266
2022*		1,273		27	1,300
2023	172	1,167	3	57	1,400
2024	12	1,325		86	1,423
2025*	97	1,324		43	1,464
2026		1,379			1,379
2027		1,379			1,379
2028	85	1,232			1,317
2029	99	1,178			1,277
Total	513	14,950	3	216	15,683
Share	3.27%	95.33%	0.02%	1.38%	100.00%

Source: Arlington County Government, Department of Community Planning, Housing Development.

* The ACG, Sept. 2019 net new unit information for two residential projects was adjusted by APS staff in Dec. 2019.

The forecast of new residential construction is updated each year by ACG for APS’s use in enrollment projections. Chart 3 displays how last years’ residential construction forecast differs from the updated Fall 2019 residential unit forecast. Note that last year there was an over estimation of residential construction for the later half of 2018. ACG has shifted the completion date for many of these units from 2018 to 2019 or 2020 in the new housing unit forecast.

Chart 3. Comparison of Future Residential Units Assumed in the 10-Year Fall 2018 and Fall 2019 Enrollment Projections

Source: Arlington County Government, Department of Community Planning, Housing Development.

A list of every residential project, its planning unit, and total number of expected students from each housing development can be found in “Attachment B: Fall 2019 Housing Unit Forecast and Projected Student Yield.”

Student Generation Rates

The Student Generation Rates are used to estimate the student yield from “new” housing based on latest trends. It is the mathematical representation of the relationship between the number of existing housing units in Arlington County and the number of students—by housing unit type—enrolled at APS on September 30 for a given year. The student generation rate can be calculated each year because of the information sharing between APS and ACG on the MHUD housing snapshot by parcel, and matching this information to APS’ student records³.

The student generation rates are updated each year to reflect the most current September 30 enrollment and county-wide housing unit inventory from the county (the MHUD data). Table 4 displays the Fall 2019 and Fall 2018 differences in county-wide Student Generation Rates for twelve combinations of housing types and affordability levels. Between Fall 2018 and Fall 2019, the largest relative increase in student generation rates occurred among multi-family garden CAF units, with an

³ Individual student information is not shared by APS with ACG because of data privacy.

increase of 0.048. Note that multi-family garden CAF units represent less than 3% of the county’s housing stock. Between Fall 2019 and Fall 2018, the relatively largest decline in student generation rates was experienced among duplex housing units, with a student generation rate fall of 0.013. A primary reason for this decline is that the number of duplex units increased by 102 units in the county between 2019 and 2018, according to MHUD data, while the number of students associated with this housing type remained fairly stable in this same period.

Table 4. Comparison of the County-Wide Student Generation Rates Used in the 10-Year Fall 2018 and Fall 2019 Enrollment Projections

Grades K to 12	Single Family Detached	Single Family Detached with Accessory Dwelling	Townhome	Duplex	Multi-family Elevator			Multi-family Garden			Condo		Total by School
					Market Rate	Mixed Income	CAF Only ¹	Market Rate	Mixed Income	CAF Only	Elevator	Garden	
Fall 2019													
Student Generation Rates *	0.498	N/A	0.214	0.345	0.066	0.127	0.656	0.254	0.383	0.632	0.055	0.113	0.232
Fall 2018													
Student Generation Rates **	0.497	N/A	0.194	0.358	0.061	0.126	0.617	0.258	0.380	0.584	0.054	0.110	0.229

	24.09%	0.03%	3.77%	2.27%	25.24%	7.86%	0.53%	8.55%	1.88%	2.99%	12.78%	10.00%	100.00%

¹ Excludes Apartment Elevator Senior Housing

Source: APS, Department of Planning and Evaluation.

The student generation rate by school level, neighborhood school boundary, housing type, and affordability level is included with “Attachment C: Fall 2019 Student Generation Rates.” Note that the Fall 2019 Student Generation Rate factor includes a field for “Single Family Detached with Accessory Dwelling.” Although ACG provided this information to APS, ACG requested that analysis which uses this housing designation not be published yet pending further refinements to the addresses for accessory dwelling units that share a single family detached home’s parcel.

Projection Approaches by School Level

In the 2019-20 school year, adjusted boundaries came into effect for certain elementary neighborhood schools⁴ and all middle schools. The Sept. 30, 2019 Enrollment Official Count, which is an important data input for the projections, for the first time reflects the actual enrollment impact of these adjusted boundaries. These boundary adjustments necessitated updates to the methodology used since last year for elementary and middle school enrollment projections, which did not have a data input which reflects the *actual* enrollment impact of the adjusted boundary. The method used in last year’s projections is outlined in a report available here, https://www.apsva.us/wp-content/uploads/2019/02/Fall-2019-28-APS-Enrollment-Report_v12_.pdf.

Meanwhile, high schools were last affected by boundary adjustments in the 2017-18 school year. The 2019-20 school year marks the third year in which there is access to Sept. 30 Enrollment Official Count data which reflects the *actual* school enrollment impact from the adjusted boundaries.

Elementary School Assumptions:

Elementary Option Schools Enrollment Assumptions:

⁴ The elementary schools with adjusted or new boundaries which took effect in the 2019-20 school year include Abingdon, Alice West Fleet, Barcroft, Dr. Charles R. Drew, Hoffman-Boston, Long Branch, and Oakridge elementary schools.

- For 2020-21, the incoming Kindergarten (K) cohorts at all elementary options schools reflect the K cohort assumed in the “Spring 1-Year Projections Update for the 2019-20 School Year” student estimate, see <https://www.apsva.us/wp-content/uploads/2019/05/Spring-Update-to-the-2019-20-Projection-04.26.2019-FINAL.pdf>
- Starting in 2021-22, the incoming K cohorts at three elementary options schools—Arlington Traditional, Claremont, and Key—were adjusted to keep each school’s K to Grade 5 capacity within historical capacity utilization thresholds. For Campbell and the Montessori Public School of Arlington, the incoming kindergarten enrollment for all projection years is fixed at the K cohorts assumed in the Spring 2019-20 estimate.
- Based on historical capacity utilization trends for K to Grade 5 students, projected enrollment at three option schools were allowed to grow above permanent seat capacity up to the following thresholds:
 - Arlington Traditional – 89 K to Grade 5 students⁵
 - Claremont – 127 K to Grade 5 students
 - Key – 53 K to Grade 5 students
- When adjusting future K cohorts to stay within K to Grade 5 school capacity thresholds, each incoming kindergarten class is assumed to have K cohorts at the maximum class size of 24 students per classroom. The immersion programs also necessitated a paring of K classrooms.
- No K to Grade 5 student capacity adjustments were made to Campbell and the Montessori Public School of Arlington.
- The CTR at Arlington Traditional and the Montessori Public School of Arlington was assumed to be 1.0. A CTR of 1.0 was applied to Arlington Traditional under the assumption that its classrooms can accommodate the maximum number of students at any one time because of its extensive wait list.
- A three-year weighted average CTR was applied to Claremont and Key Immersion. A three-year weighted average is assumed for these schools since students that might leave the program cannot be easily replaced with students on wait lists because of the immersion programs’ language requirements. The weights were 40% for 2018 to 2019, 20% for 2017 to 2018, and 20% for 2016 to 2017; any possible impact to option school enrollment stemming from the neighborhood school boundary adjustments account for the greater emphasis on a CTR based on 2018 to 2019 enrollment trends.
- The three-year weighted average CTR—using weights of 40% for 2018 to 2019, 20% for 2017 to 2018, and 20% for 2016 to 2017—was also applied to Campbell.

Elementary Neighborhood Schools Enrollment Assumptions:

- Incoming K cohorts by neighborhood schools for 2020 and beyond was determined through the following process:
 - A birth to kindergarten ratio is applied to actual or forecasted births to estimate the number of incoming kindergarten students five-years later.
 - From the total incoming kindergarten cohort, the number of K student allocated to option schools is subtracted.

⁵ Arlington Traditional’s projected enrollment for 2020-21 and 2021-22 was permitted to go above the overcapacity threshold of 89 students in consultation with educational leaders. All other projection years adhere to the overcapacity threshold of 89 students.

- The remaining kindergarten students, that only reflect neighborhood school K cohorts, are distributed to individual neighborhood schools based on each neighborhood schools 3-year historical share of kindergarten students.
- Neighborhood school CTRs:
 - For schools with boundary adjustments which took effect on Sept. 2019, the CTR was weighted 50%, 25%, and 25% for 2018 to 2019, 2017 to 2018, and 2016 to 2017 respectively. These weights give more emphasis to enrollment trends from 2018 to 2019, which includes 2019 when adjusted boundaries took effect.
 - For schools with no boundary adjustments, the CTR weights were 40%, 40%, 20% for 2018 to 2019, 2017 to 2018, and 2016 to 2017 respectively. These weights give more emphasis to enrollment trends since 2018 when updates to the Options and Transfer policy took effect.
 - Exceptions to the above method for calculating CTRs were made at two schools:
 - Dr. Charles R. Drew, CTRs for Grades 3 to 4 and 4 to 5 used the county-wide rates of 0.99 and 1.00 respectively. Otherwise it would have been 0.87 and 0.85 respectively which were deemed low and anomalies.
 - Long Branch, CTR for Grades 4 to 5 used the county-wide rate of 1.00. Otherwise it would have been 1.22 which was deemed high and an anomaly.
- Note:
 - For neighborhood elementary schools that experienced boundary adjustments starting in the 2019-20 school year, historical K to Grade 5 student data (pre-Sept. 30, 2019) by students' residence address was used to calculate CTRs. Because student addresses are spatially fixed, these addresses can be retroactively associated with adjusted boundaries that did not exist in 2018, 2017, or 2016 using [GIS software](#).
 - Adjustments to 2020 and 2021 enrollment figures were performed to account for sibling/grandfathering and the Fort Myer CDC exceptions.

Middle School Assumptions:

In the 2019-20 school year, all neighborhood middle schools experience boundary adjustments. Below are methodological approaches and assumptions used to accommodate changes in historical enrollment trends stemming from the Fall 2019 boundary adjustments:

- The neighborhood school CTRs were calculated based on the following assumptions:
 - Grades 5 to 6
 - Weights of 50%, 25%, 25% for 2018 to 2019, 2017 to 2018, and 2016 to 2017 were applied. These weights give more emphasis to enrollment trends from 2018 to 2019, which includes 2019 when adjusted boundaries took effect.
 - To calculate Grade 5 to 6 CTRs for 2016 through 2018, trends among 2016 through 2018 attending Grade 5 students (reflecting pre-Fall 2019 boundaries) were compared with Grade 6 enrollment for 2016 through 2018, which also reflect the former (pre-Fall 2019) boundaries.
 - The 2019 to 2018 CTR was based on 2018 Grade 5 students residing in the new (Fall 2019) boundary, calculated using [GIS software](#), and the Sept. 30, 2019,

Grade 6 enrollment at each neighborhood school, which reflect the new middle school neighborhood boundaries.

- Grades 6 to 7 and 7 to 8 CTRs:
 - The two-year average of the 2016 to 2017 and 2017 to 2018 CTRs was used, which reflect the former (pre-Fall 2019) boundaries, to project future Grade 7 and 8 cohorts.
- Middle School Option Schools/Programs:
 - Eunice Kennedy Shriver program's enrollment as of Sept. 30, 2019 is used for all projected years; no CTRs are applied.
 - H-B Woodlawn's incoming Grade 6 cohort is assumed to be the same as that from Sept. 30, 2019 for all projected years.
 - H-B Woodlawn uses a three year average CTR for Grades 6 to 7 and 7 to 8.

High School Assumptions:

High school boundaries were last adjusted in the 2017-18 school year. There are now three years' worth of enrollment information for neighborhood high schools which reflect the enrollment impacts of the 2017-18 boundary adjustments.

- All neighborhood schools' CTRs for Grades 9 to 12 were calculated based on a three-year average, no weights were applied.
- As of Sept. 30, 2019, Arlington Career Center's official enrollment now reflects only full-time Arlington Tech, ACADE, HILT and PEP students. Conversely, neighborhood high schools no longer include full-time Arlington Career Center students in their official enrollment counts. Because of this new method to reporting Arlington Career Center's and neighborhood schools' enrollment, historical enrollments for neighborhood schools were retroactively adjusted to exclude full-time Arlington Career Center students. This was done so that pre-2019 neighborhood high school enrollment counts align with 2019 neighborhood high school enrollment counts when calculating CTRs.
- Arlington Career Center's enrollment projections are a combination of:
 - Assumption that the Sept. 30, 2019 enrollment by grade for ACADE, HILT, and PEP will continue for all the projection years.
 - Assumption that the Arlington Tech incoming Grade 9 cohort will be 150 students, the CTR used for each grade is 1.0, and enrollment has a ceiling of 600 students.
- H-B Woodlawn's enrollment projections assume:
 - A 1.25 CTR for Grade 8 to 9, based on 2016 through 2018 enrollment trends. Enrollment for 2019 was excluded since it would have increased the Grade 8 to 9 CTR to 1.61, which was assessed as high and an anomaly.
 - The Grade 9 to 10, 10 to 11, and 11 to 12 CTRs are based on historical enrollment three-year averages.
 - Each incoming Grade 9 is based on assuming a Grade 8 cohort of 82 students, from the Sept. 30, 2019 enrollment.
- Enrollment by grade as of Sept. 30, 2019 is used for all projection years for Arlington Community High School, Eunice Kennedy Shriver, Langston, and New Directions programs.

Estimated student impact from new housing:

- Assumptions on the timing of the enrollment impacts from new housing:
 - Full impact in the year of construction is assumed for Committed Affordable Units (CAFs) and Single Family Detached (SFD) units.
 - The impact from all other housing types, mixed-income, and market-rate units is spread over a two-year period.
- The student yield from new housing is added on a cumulative basis across projection years for Grades K, 6, and 9.
- For all other grades, the student yield from new housing is not added on a cumulative basis. Rather the student yield from new residential construction is added on the year of construction (for CAFs and SFD) or over the course of two years (for all other housing types) only once.

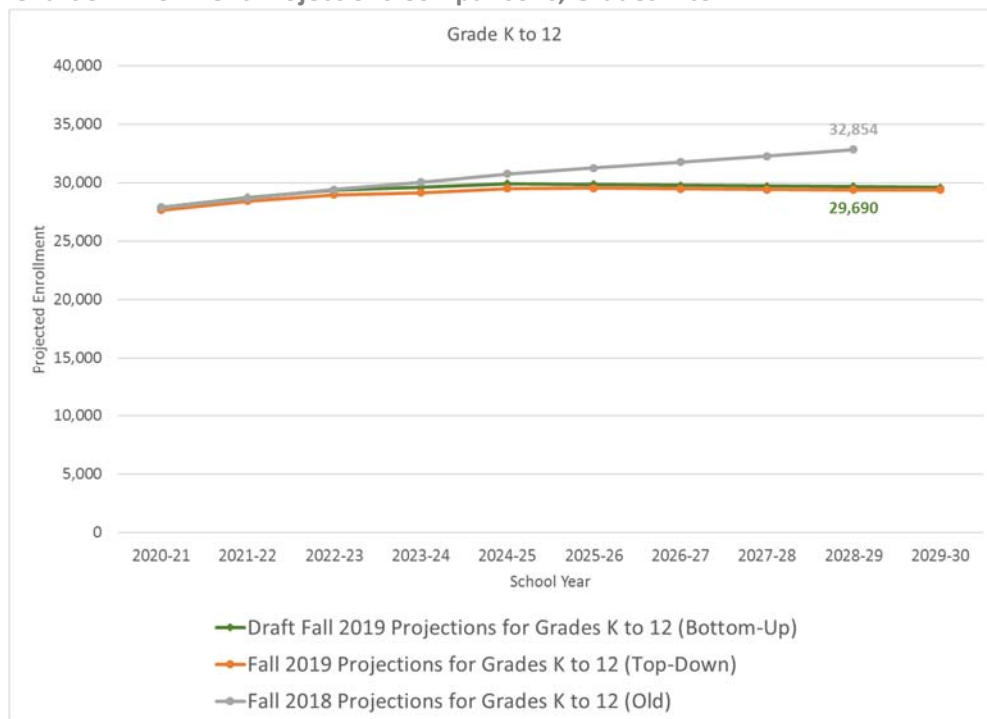

Steps to Validate Projections

To validate the enrollment projections, an internal review committee met during the enrollment projection process to discuss assumptions, technical issues that arose, and review projection results. This process was put in place to allow various perspectives and expertise to assist with decision-making on assumptions. The stakeholders from APS included staff from the departments of Planning and Evaluation (P&E), Facilities and Operations, and Finance and Management Services. In addition, external experts from Arlington County Government, CPHD and Dr. Richard Grip from Statistical Forecasting LLC also offered perspectives.

The P&E staff tasked to perform the enrollment projections modeling identified key assumptions, such as how to adjust cohort transition rates to reflect the update to the Options and Transfer Policy, that needed input from the Internal Review Committee. After this committee provided feedback, the P&E staff drafted various modeling approaches that reflected the committee’s suggestion and performed quality control checks on the projections modeling formulas. Dr. Grip was then consulted to see which modeling approach was most appropriate and validated the approach and results.

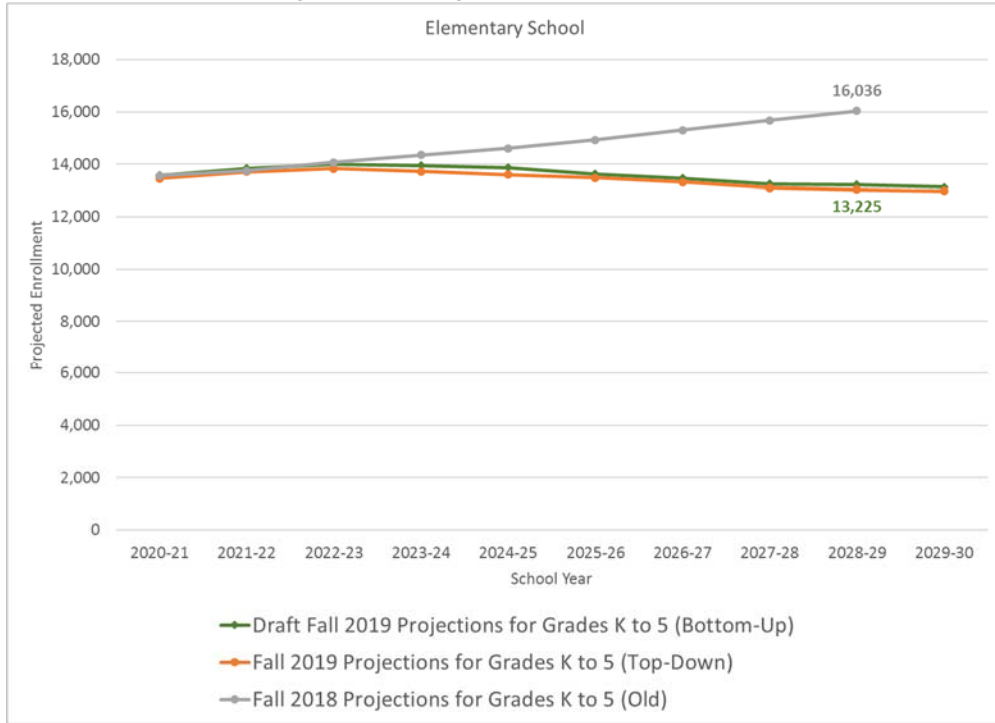

An important review step suggested last year by the Internal Review Committee was the development of an alternative projection model that used county-wide enrollment figures, construction assumptions, and cohort transition rates. The enrollment projections from this approach, known as a “top-down” approach, was compared to the projections from the “bottom-up” approach, which is outlined in this report. The purpose of this comparison was to observe the enrollment growth trends from each approach with the goal that they both reflect similar scales of enrollment growth trends. The enrollment projections from the two approaches was reviewed and ultimately validated with assistance from Dr. Grip.

¹ Five-year-old Montessori students are in Kindergarten.

² PreK SPED classes (16) are in Integration Station as placeholders for Fiscal Year (FY) 2021. Integration Station is housed outside of APS with community PreK partners; totals do not include 5.0 FTE staffing for 60 community-based resource students.

³ Schools that accept enrollment through a lottery process can also include students from the Secondary Program for Students with Autism (Grade 6 to 12) and H.S. HILT students (English Learners) enter through the year (Grade 9 to 12). H-B Woodlawn is an example of such a school.

⁴ Arlington Career Center full-time students include Arlington Tech, Academic Academy, HILT Institute, and PEP. Arlington Career Center part-time students are included at their neighborhood school.

⁵ Langston and Arlington Community membership does not include students over 20 years old. The above projections do not include the adult students at Arlington Community and at Langston.

⁶ PreK estimates are prepared by the Department of Teaching & Learning.

Note:

All Grade K-12 Special Education students, including those in self-contained classes, and English Learners are included within the grade totals at each school.

The projections for option schools were calculated differently from neighborhood schools. For certain option schools, either their enrollment was static as of Sept. 30, 2018 or the incoming class was based on the prior year's Spring Update to the Fall Projections.

All Arlington Public Schools (APS) budget and operations decisions are based on the best information available at the time. Staff and community members are reminded that funding forecasts from Arlington County and the state may change, based on many external factors.

Similarly, student enrollment and projections are based on the best available information, but are also subject to change due to employment, housing and other economic factors. For these reasons, APS and the Arlington School Board may adjust future budget allocations, staffing and other operations decisions to reflect the existing community and operating landscape.

¹ Five-year-old Montessori students are in Kindergarten.

² PreK SPED classes (16) are in Integration Station as placeholders for Fiscal Year (FY) 2021. Integration Station is housed outside of APS with community PreK partners; totals do not include 5.0 FTE staffing for 60 community-based resource students.

³ Schools that accept enrollment through a lottery process can also include students from the Secondary Program for Students with Autism (Grade 6 to 12) and H.S. HILT students (English Learners) enter through the year (Grade 9 to 12). H-B Woodlawn is an example of such a school.

⁴ Arlington Career Center full-time students include Arlington Tech, Academic Academy, HILT Institute, and PEP. Arlington Career Center part-time students are included at their neighborhood school.

⁵ Langston and Arlington Community membership does not include students over 20 years old. The above projections do not include the adult students at Arlington Community and at Langston.

⁶ PreK estimates are prepared by the Department of Teaching & Learning.

Note:

All Grade K-12 Special Education students, including those in self-contained classes, and English Learners are included within the grade totals at each school.

The projections for option schools were calculated differently from neighborhood schools. For certain option schools, either their enrollment was static as of Sept. 30, 2018 or the incoming class was based on the prior year's Spring Update to the Fall Projections.

All Arlington Public Schools (APS) budget and operations decisions are based on the best information available at the time. Staff and community members are reminded that funding forecasts from Arlington County and the state may change, based on many external factors.

Similarly, student enrollment and projections are based on the best available information, but are also subject to change due to employment, housing and other economic factors. For these reasons, APS and the Arlington School Board may adjust future budget allocations, staffing and other operations decisions to reflect the existing community and operating landscape.

¹ Five-year-old Montessori students are in Integration Station in Kindergarten.

² PreK SPED classes (16) are in Integration Station as placeholders for Fiscal Year (FY) 2021. Integration Station is housed outside of APS with community PreK partners; totals do not include 5.0 FTE staffing for 60 community-based resource students.

³ Schools that accept enrollment through a lottery process can also include students from the Secondary Program for Students with Autism (Grade 6 to 12) and H.S. HILT students (English Learners) enter through the year (Grade 9 to 12). H-B Woodlawn is an example of such a school.

⁴ Arlington Career Center full-time students include Arlington Tech, Academic Academy, HILT Institute, and PEP. Arlington Career Center part-time students are included at their neighborhood school.

⁵ Langston and Arlington Community membership does not include students over 20 years old. The above projections do not include the adult students at Arlington Community and at Langston.

⁶ PreK estimates are prepared by the Department of Teaching & Learning.

Note:

All Grade K-12 Special Education students, including those in self-contained classes, and English Learners are included within the grade totals at each school.

The projections for option schools were calculated differently from neighborhood schools. For certain option schools, either their enrollment was static as of Sept. 30, 2018 or the incoming class was based on the prior year's Spring Update to the Fall Projections.

All Arlington Public Schools (APS) budget and operations decisions are based on the best information available at the time. Staff and community members are reminded that funding forecasts from Arlington County and the state may change, based on many external factors.

Similarly, student enrollment and projections are based on the best available information, but are also subject to change due to employment, housing and other economic factors. For these reasons, APS and the Arlington School Board may adjust future budget allocations, staffing and other operations decisions to reflect the existing community and operating landscape.

¹ Five-year-old Montessori students are in Integration Station in Kindergarten.

² PreK SPED classes (16) are in Integration Station as placeholders for Fiscal Year (FY) 2021. Integration Station is housed outside of APS with community PreK partners; totals do not include 5.0 FTE staffing for 60 community-based resource students.

³ Schools that accept enrollment through a lottery process can also include students from the Secondary Program for Students with Autism (Grade 6 to 12) and H.S. HILT students (English Learners) enter through the year (Grade 9 to 12). H-B Woodlawn is an example of such a school.

⁴ Arlington Career Center full-time students include Arlington Tech, Academic Academy, HILT Institute, and PEP. Arlington Career Center part-time students are included at their neighborhood school.

⁵ Langston and Arlington Community membership does not include students over 20 years old. The above projections do not include the adult students at Arlington Community and at Langston.

⁶ PreK estimates are prepared by the Department of Teaching & Learning.

Note:

All Grade K-12 Special Education students, including those in self-contained classes, and English Learners are included within the grade totals at each school.

The projections for option schools were calculated differently from neighborhood schools. For certain option schools, either their enrollment was static as of Sept. 30, 2018 or the incoming class was based on the prior year's Spring Update to the Fall Projections.

All Arlington Public Schools (APS) budget and operations decisions are based on the best information available at the time. Staff and community members are reminded that funding forecasts from Arlington County and the state may change, based on many external factors.

Similarly, student enrollment and projections are based on the best available information, but are also subject to change due to employment, housing and other economic factors. For these reasons, APS and the Arlington School Board may adjust future budget allocations, staffing and other operations decisions to reflect the existing community and operating landscape.

¹ Rates reflect the updated elementary and middle school boundaries which took effect in the 2019-20 school year .

² Excludes Apartment Elevator Senior Housing

Note:

- A dash "-" is used when a particular housing type with residing students is not present in an individual school attendance boundary.
- Some students were not geocoded for reasons such as (i) they are children of employees who live outside Arlington County, (ii) they reside on Joint Base Myer-Henderson Hall (federal jurisdiction), or (iii) they are homeless or in foster care outside Arlington County, or live at a shelter.

Source:

Rates are based on September 30, 2019 APS Enrollments (Grades K-12) and July 1, 2019 Master Housing Unit Database (MHUD) from Arlington County Government, CPHD, Planning Division.

Attachment D: Background on Projections

Consultant and Community Review

The 2015 Community Facilities Study (CFS) included a review of changing demographics. (Community Facility Study, p. 48) Source: <https://commissions.arlingtonva.us/community-facilities-study/>

This 2015 study came out of concerns about the accuracy of the County’s and Schools’ forecasts and projections, given the significant growth in school enrollment in recent years and projections indicating that the pace of growth would continue over the next decade. The County and Schools brought in consultants from Statistical Forecasting and RLS Demographics to review and evaluate the County’s and Schools’ methodologies.

- The consultants concluded that the forecast and projection methodologies¹ employed by the County and Schools are valid and appropriate for Arlington.
- The consultants also determined that two different datasets and methodologies are necessary to meet different purposes.
- While the consultants validated the forecast and projection methodologies, they recommended steps that could be taken to further improve accuracy.

Recommendation	Steps APS has taken to date
<p><u>APS</u>: develop annual reports on projections and improve projections webpages</p> <p><u>County</u>: document the forecast methodology comprehensively</p>	<ul style="list-style-type: none"> • Revised format of Annual 10-Year Projections Report <ul style="list-style-type: none"> – Clarify methodology – Show data inputs <p>www.apsva.us/wp-content/uploads/2019/02/Fall-2019-28-APS-Enrollment-Report_v12_.pdf</p> <ul style="list-style-type: none"> • Reorganized, more user-friendly projections webpage: www.apsva.us/statistics/enrollment-projections/
<p><u>County</u>: refine school enrollment projections by analyzing housing data such as unit type, number of bedrooms and length of homeownership</p>	<p>The county provides APS with housing data by type and affordability, that is used by APS to develop student generation rates.</p> <p>More information available via Joint School Board-County Board Work Session on Dec. 3, 2019</p> <ul style="list-style-type: none"> • Collaboration and data sharing to inform school projections • In-depth information about analyses of housing unit type <p>go.boarddocs.com/vsba/arlington/Board.nsf/files/BJHVTB824303/\$file/120319%20Joint%20Work%20Session%20-Projections%20and%20Population%20Growth%20Presentation%20-%20rev.pdf</p>

Recommendation	Steps APS has taken to date
<p><u>APS</u>: monitor emerging trends in multi-family housing and potential changes in student generation rates</p>	<p>The 10-Year Projection Reports annually update student generation rates by housing types More information available via Joint School Board-County Board Work Session on Dec. 3, 2019; in-depth information about:</p> <ul style="list-style-type: none"> • Emerging trends in multi-family housing • Changes in student generation rates <p>go.boarddocs.com/vsba/arlington/Board.nsf/files/BJHVTB824303/\$file/120319%20Joint%20Work%20Session%20-Projections%20and%20Population%20Growth%20Presentation%20-%20rev.pdf</p>
<p><u>County</u>: Supplement County forecasts with a cohort-component and demographic analysis, which could help predict future births and students by focusing on the County’s population of women of childbearing age and fertility rates</p>	<ul style="list-style-type: none"> • More information available via Joint School Board-County Board Work Session on Dec. 3, 2019, which included factors to predict future births: <ul style="list-style-type: none"> - Cohort component - Demographic analysis • Contracted RLS Demographics in Fall 2019 to update County forecast model, the Cohort Projection system (last updated in 2016).² <p>Key findings:</p> <ul style="list-style-type: none"> - Comparisons of forecasted and actual births for 2017 and 2018 showed that births were over-estimated in the forecast model - Total Fertility Rate estimated to decline from 1.44 for 2010-2015 to 1.34 in 2015-2020 - Reduced level of in-migration for ages 20-29, compared with 2016 model³ <p>go.boarddocs.com/vsba/arlington/Board.nsf/files/BJHVTB824303/\$file/120319%20Joint%20Work%20Session%20-Projections%20and%20Population%20Growth%20Presentation%20-%20rev.pdf</p>

² RLS Demographics’ update of the birth forecasts includes:

- The latest AGC population forecast (Round 9.1)
- Updated analysis of age-specific fertility rates using 2010 to 2018 historical birth data and US Census bureau estimates of the distribution of the female population by age
- Updated analysis of age-specific migration using US Census Bureau estimates up to July 1, 2018

³ The updated migration uses the latest Census estimates extrapolated to 2020

Consultant Review

March 2017 Review of APS' Enrollment Projection Process (Presented to School Board on April 6, 2017)
<https://www.apsva.us/wp-content/uploads/2015/04/March-22-2017-Projections-Review-Report.pdf>

In Spring 2017, Statistical Forecasting was hired by APS to review the enrollment projection process and to offer recommendations on standardizing the process for the future. As a result, the following steps were taken:

- In September 2017, a reorganization moved the Director of Facilities Planning and responsibility for enrollment projections from Facilities and Operations to the new Department of Planning and Evaluation.
- APS started to implement the recommendations in the 2017 10-Year Projections.
- In January of 2018, APS hired a principal planner to oversee the projections process.
- The 2018 10-Year Projections did the following:
 - Continued to build upon the recommendations defined in the Statistical Forecasting report
 - Factored in new boundaries for 2019-20 for elementary and middle school, and changes to the Options and Transfer Policy
- The work plan for the enrollment projections builds three reviews into the process, including:
 - An internal review in the summer and again in November by:
 - APS staff in P&E, Finance & Management Services, and Facilities & Operations
 - County government staff from CPHD
 - Statistical Forecasting consultant
 - An external review with representatives from the community and advisory committees in November
- Additional work was done in 2019 by RLS Demographics to update the Arlington County births forecast model, the Cohort Projection System, last updated in 2016.
