A. Responses to Bidder Questions: The following information is provided to help Bidders submit a Bid in response to ITB 95FY23. Any updates to Drawings and Specifications for this Project will be available electronically as PDF file format by the Owner's Representative (Engineer), CMTA Engineering. To access updated Drawings and Specifications, please contact Owner's Representative (Engineer), Brice Watson via email at bwatson@cmta.com.

No.	Contract Document Reference	Bidder Questions	Response
1	230700	Section 230700 pg. 4 - 5.8 pipe insulation. 5.8.1 Hydronic chilled water, 5.8.2 Hydronic hot water, 5.8.3 Domestic water fill lines, 5.8.4 Condensate drain lines, 5.8.5 Refrigerant suction lines. Q:Is the Heat Pump water supply & return or the Condenser water supply & return piping to be insulated? If so, please provide the type of insulation and the thickness required?	Added clarifying section to 232200 in Addendum 2 that allows heat pump piping to be HDPE with copper runouts. HDPE piping mains for the heat pump piping does not require insulation, while copper piping for all systems will require insulation. Added heat pump loop and condenser loop insulation requirement to 5.8 of section 230700.

		the Heat Pump water supply & return or the Condenser water supply & return piping to be insulated? If so, please provide the type of insulation and the thickness required?	insulation. Added heat pump loop and condenser loop insulation requirement to 5.8 of section 230700.
2	M230	M230 show the two OAAHUs to have screen walls, we need structural steel design. Is there a specification on the screen wall?	Design work is currently underway on this change, but is not expected to be completed before the final addendum time. Addendum 2 will include an allowance for this scope to carry through bid.
3	M701	Cooling tower tons is listed on mechanical schedule as 200 tons, the stated performance conditions are 500gpm at 95/85/78. Please confirm the cooling tower should be sized for the stated performance conditions which is less than 200 cooling tower tons(15,000btu/h)	Flow of 500 gpm is correct. tower schedule has been corrected in addendum 2 to show 170 nominal tons to match.
4	M701	The cooling tower sump tank WT-1 is listed on the mechanical schedule with a 4,500-gal capacity. The dimensions are called out to be 8'x8'x8', this volume would only be 3,381 gallons. Please advise on the requirement for the tank including confirmation on the internal volume and external dimensions	Corrected schedule and tank to show 10' in height to match total capacity. While the tank may sit with 9' filled height normally and the bottom ~2' might not be usable fill this will equate to 3,350 gallons nominally. This will be 6+ minutes of pump operation at full flow and more roughly 3x the estimated volume of the tower, piping, and heat exchanger.
5	E100 E101	All old light features on cafeteria, library, and gym will be replace on phase 2, 2024.	This is correct. This information has also been added to drawings. Alternate note changed Addendum 1 Narrative.
6	APS	Please confirm replace carpet on corridors and rooms where they are going to add closets and equipment. Phase 2, 2024	Per Addendum #02 drawings, carpet in hallway is to be replaced as part of the base bid. Classroom carpet replacement/pathcing is to occur as indicated in the drawings.
7	APS	Please confirm staging areas will be half of the basketball court and part of the field can we stage materials etc.	A sketch has been provided for informational purpose to define construction laydown areas that may be used by the contractor. The sketch defines areas that may be used during construction for school unoccupied (Summer) and occupied times (Fall, Winter, Spring).
